Define the Problem Statements

Date	23 October 2026
Team ID	SWTID-2026-8980
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

The customer problem statement is written from the perspective of the people who use or manage the school IT helpdesk. It identifies who they are, what they are trying to do, the difficulty they face, its cause, and the resulting impact.

Problem Statement (PS-1 and PS-2)

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A school IT helpdesk staff member	review incoming support tickets and classify each issue correctly	I must manually identify the issue and choose its category and subcategory	tickets contain different issues such as Wi-Fi failures, projector problems, password/login issues, and slow computers	time-consuming and concerned about delays or inconsistent classification
PS-2	A student or teacher requesting IT support	report an issue and receive confirmation that the request has been recorded	I may not know whether the request has been acknowledged, while the helpdesk processes it	the existing manual process requires staff to review and process each ticket, and confirmation is not automatic without a notification workflow	uncertain about the request status and eager for a clear ackno wledgement

Consolidated Problem Statement

The school IT helpdesk needs a consistent way to classify incoming support tickets because manually reviewing and categorizing requests about network connectivity, hardware, account access, and system performance takes time and may lead to inconsistent results. Students and teachers also need a clear acknowledgement that their request has been recorded. The project addresses these needs through keyword-based classification in ServiceNow Flow Designer and an automated email confirmation to the caller.

Note: These statements reflect the project scope described in the supplied documentation. The emotional impacts are expressed as customer-perspective wording for the template; they are not claimed to be results of a user survey.
